Understanding recent economic developments in the oil market have dramatically affected the price of refined fuels in the state of Arkansas, the Arkansas State Plant Board is aware that some retail motor fuel dispensers cannot meet the display of pricing requirements of *Liquid-Measuring Devices Code* as published in the 2005 edition of the *National Institute of Standards and Technology (NIST) Handbook 44*. Specifically, **Section S.1.6.1. Indication of Delivery, Section S.1.6.4.1. Unit Price, and Section S.1.6.5. Money-Value Computations.**

Given consideration to the above, the Arkansas State Plant Board is temporarily permitting owners/operators, with dispensers that cannot meet the above stated requirements, to post a unit price at $\frac{1}{2}$ gallon and to increase total indicated total sale price by two times (or double). To utilize this pricing practice, the following conditions must be met.

1. The owner/operator must place a sign on each affected dispenser clearly stating the posted price per gallon and the total indicated sale is $\frac{1}{2}$ price and will be doubled.
2. The sign must be conspicuously placed on each face of the dispenser where it can be viewed from a reasonable customer position.
3. The lettering on the sign should be no less than $\frac{3}{4}$ " in height.
